

SOULEIMAN AYOUB

I've studied at Polytechnique in software engineering. I describe myself as a person with integrity, hardworking and passionate. Combining my two greatest passions, mathematics and programming, I have been challenging myself by developing software for 8 years now. Finally, I think that good communication is what makes a great team.

WORK HISTORY

📅 Jan 2022 - Present
📍 Omnia, Deloitte **Consultant**
• Developed a webapp in a team where I worked with React and Django
• Worked with a multitude of **AWS services** (Opensearch, DynamoDB, Lambda, ...)
• Another project used K8, Web3, React

📅 May 2021 - Aug. 2021
📍 Desjardins Group, Montreal **Data Science Internship**
• Designed an **unsupervised model** capable of consolidating the financial profile of multiple users
• Developed a **Flask REST API**
• Presented multiple times our team's work to Desjardins partners and in front of Guy Cormier

📅 May 2020 - Aug. 2020
📍 Mitacs - Eduplan Solutions, Montreal **Data Science Internship**
• Created many ML models in **Python** whose purpose would be to recommend means and goals to students then compared the models with each other thanks to performance metrics
• Extracted information from the database using **SQL**

📅 Sept. 2019 - May 2020
📍 Polytechnique Montreal **Initiation to ML Research**
• Brain **segmentation** of newborns from 3D MRI scans using **Computer Vision**
• Scraped a website to download the database

EDUCATION

📅 Aug. 2018 - Dec. 2021
📍 Polytechnique, Montreal **Bachelor in Software Engineering**

📅 Aug. 2016 - May 2018
📍 College Bois-de-Boulogne **DEC in Computer Science & Math**

ACHIEVEMENTS, HONOURS AND AWARDS

- 🏆 Recipient of the AWS Cloud Practitioner certification
- 🏆 Mention of Excellence for outstanding performance at Polytechnique Montreal (GPA : 3,63/4)
- 🏆 Recipient of the Admission Excellence Scholarship at Polytechnique Montreal
- 🏆 2nd place in a pitch competition at Polytechnique Montreal
- 🏆 2nd place in a math competition at College Bois-de-Boulogne (COMC)

SOME COMPLETED PROJECTS

Unilinks | *Ionic, Angular, Firebase*

- Cross-platform Progressive Web App (IOS, Android, Web) which aims to highlight the interuniversity events of different associations.
- 60 downloads of the application

Exo Computer Vision Project – Fourth Year Project (LOG8985) | *Python*

- My team and I were tasked to determine the approximate occupancy rate of parking thanks to recordings of multiple cameras per parking
- Made complex algorithms, used PyTorch and Tensorflow and made a PostgreSQL Database

ChessAI | *Python, Pygame*

- Reprogrammed the chess engine that I made in high school but with a better architecture and in another language
- AIs made from scratch: Supervised ML algorithm and Alpha-beta pruning
- <https://github.com/souleiman2/ChessAI>

Third Year Project (LOG3900) | *Kotlin, Angular, Node, GraphQL*

- My team and I made a drawing app (similar to skribbl.io) that worked on PC as well as Android. This program communicated thanks to a server which we coded as well. We implemented virtual players (bots) that were able to draw as well

HACKATHONS

- **Google Tech Challenge**
- **McGill Physics Hackathon:** Angular velocity in arbitrary dimensions (on github) 4th place
- **AI Hackathon at UdeM** 6th place
- **HackQC** (3 days): environmental website that took data from a database and used a back-end made with Django
- **ConcordAI Artificial Intelligence Hackathon**
- **LHGames**
- **Hackathon BDC**
- 2 Capture The Flag
